NCDMS Becomes Onpoint CDM

The National Claims Data Management System (NCDMS) gets a new look and feel beginning October 1, 2009, when it begins operating under its new name, Onpoint CDM (Claims Data Manager). It remains operated and owned by Onpoint Health Data (formerly known as the Maine Health Information Center (MHIC)).

Onpoint CDM is the next generation of NCDMS, the nation's front-runner in All Payer Claims Databases since 1994. NCDMS was the first of its kind, built to help 30 of Maine's largest employers examine their healthcare costs and trends using a single, coordinated database. In 2002, it became a statewide system, integrating claims from nearly every Maine payer in every setting.

Three years later, New Hampshire signed on, followed by Massachusetts (2007), Vermont (2008), and Minnesota (2009). More states now are asking how we can help them better understand their healthcare trends and costs.

One answer: Onpoint CDM.

Onpoint CDM remains a ground-breaking data solution for integrating claims from all payers in all settings. It's backed by robust security, advanced tools, and the expert staff at Onpoint Health Data. Always has been, always will be.

What's new? A cleaner user interface and the addition of multi-file upload, allowing submitters to deliver several files in a single operation. Onpoint CDM retains the secure capabilities you've come to expect, but adds a new look, feel, and functionality to help you get the job done more efficiently.

Always innovative, now improved. Welcome to Onpoint CDM.
